Turner Joins Great Lakes Engineering Group

LANSING, Mich.--(BUSINESS WIRE)--Great Lakes Engineering Group announced today that it is expanding its firm, beginning with the addition of Maureen Turner, P.E. as the Director of Engineering Services. Turner will oversee all divisions of the company including business operations, financial performance, business development and personnel oversight and development. Turner brings 32 years of experience to Great Lakes Engineering Group.

“Maureen brings a wealth of knowledge and expertise to Great Lakes Engineering Group and I’m thrilled to have her on my team. She will be a great asset to our firm,” said Amy Trahey, President of Great Lakes Engineering Group.

In addition to her management responsibilities, Turner will be responsible for project controls, which includes budgeting and scheduling control issues related to the new North Terminal Redevelopment Project at Metro Airport in Romulus. The firm has provided significant engineering services to the airport over the last several years.

Turner previously served as the Quality Management System Monitor and Assistant Business Unit Manager at CTE. Prior to her time with CTE, Turner was the Engineer-Manager of Alpena County Road Commission, where she was responsible for a 40-person agency while maintaining over 500 miles of roadways and bridges. She graduated Summa Cum Laude from the University of Detroit with a BS in Civil Engineering.

A female owned firm, Great Lakes Engineering Group, was founded in April of 2000 upon the need for structural engineering services that specialize in the field of bridges. Since that time, the firm has evolved to offer a complete range of civil engineering services including bridge inspection, design and scoping, as well as construction oversight and emergency services.

A photo of Maureen is available. Please contact The John Truscott Group, (517) 485-8404.
