Resident and Non-Resident Student Network Connectivity Policy

Applies To: All students
Issued By: Director of ITS
Date Issued: July 5, 2005
Policy Number: ITS-0003
Policy Version Number: 1.1
Last Review Date: March 1, 2018
Last Revised Date: March 1, 2018

Preamble

It is strongly advised for the protection of your data that your system is equipped with up-to-date virus protection (configured for daily updates) and up-to-date operating system security patches (configured for daily updates). Unprotected systems are highly susceptible to infection and often become infected without any visible signs.

For all resident students, a hard-wired data connection port is available in each room for network connectivity.

For students with WIFI capability, a wireless environment exists around the University.

Policy

Any system unfairly using available bandwidth whether deliberately or via compromised system will be immediately disconnected from the network without notice.

Any system using available bandwidth for illegal or improper activities detected will be immediately disconnected from the network without notice.

For faculty, staff and administration, under no circumstances is non-University equipment connected to the network.

Regulations

The University reserves the right to refuse connectivity to users who violate this policy. In most instances the disconnection will remain in place until the infraction has been cleared.

Repeated offenders may be subject to permanent disconnection.
